

YOU'LL NEVER BE BETTER PROTECTED

Bespoke Mobile Access Platforms

- MULTI-PURPOSE PLATFORMS DESIGNED TO CUSTOMER REQUIREMENTS
- CONSTRUCTED FROM TUBULAR FITTINGS
- AVAILABLE IN ALUMINIUM OR STEEL
- DESIGNED TO EN1004:2004, BS 1139-6:2005 OR PAS 250

Bespoke Mobile Access Platforms

Kee Safety is a leading global supplier of safety systems and solutions and has been supplying a vast array of access platforms for over 70 years.

Utilising either KEE LITE aluminium or KEE KLAMP cast iron tubular fittings, platforms have been designed and built which are flexible, durable and importantly robust, allowing customers the opportunity to create bespoke designs which eliminate the limitations of fabricated, off-the-shelf platforms.

Quality Assurance

KEE LITE and KEE KLAMP fittings have been tested and approved by TÜV, one of Europe's leading test houses. The fittings have also undergone vibration testing to ensure they remain effective when in constant use.

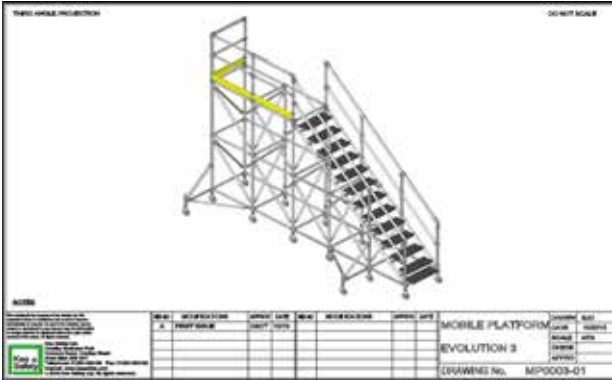

KEE SAFETY has also undertaken independent testing at LUCIDEON of a number of platform designs to ensure they meet the relevant British and European standards.

Professional Design

Whilst each platform is designed to suit a specific application, each one is designed in accordance with the relevant criteria from EN 1004:2004 or BS 1139-6:2005 or PAS 250. A CAD drawing is supplied with each quotation to allow customers to visualise our proposal. Utilising fittings allows us to safely design structures up to a working platform height of 3m but we can exceed this with the addition of extra support arms to stop the structure from becoming unstable when in use.

Bespoke Mobile Access Platforms

Kee®
Lite

Features

- Available in Aluminium or Steel
- Modular Design
- Manufactured using stock items
- Can be pre-assembled
- Compliant with recognised standards

Benefits

- Excellent strength and corrosion resistance
- Bespoke, tailored platform
- Short delivery lead times
- Minimal on-site disruption
- Safety assured when used correctly

Delivery and Installation

All KEE SAFETY platforms are delivered with drawings clearly showing how the platform is to be assembled. Some smaller platforms will be delivered fully assembled and will only require checking over before use on site. Larger platforms will be delivered as loose parts and KEE SAFETY installers will assemble the platform on site for you.

The full range of tube, fittings and ancillary components such as castors, stair treads, flooring and toe boards is held in stock at our warehouse so we are able to deliver within a matter of days from agreement to the final design.

Product Options

- Choose from aluminium or steel
- Flooring can be either high grade nylon treads, chequer plate or grating
- Castors or fixed feet, or a mix of both
- Variable heights
- Variable lengths
- Padded Bumper bars to prevent damage to equipment e.g. vehicles, engines

If at any time the platform design needs to be changed, KEE SAFETY can easily modify the existing platform to meet new requirements. Just contact us for advice and a quotation.
